Question #41

Topic 1

You have a Microsoft 365 E5 subscription that uses Microsoft 365 Defender.

You need to review new attack techniques discovered by Microsoft and identify vulnerable resources in the subscription. The solution must minimize administrative effort.

Which blade should you use in the Microsoft 365 Defender portal?

- A. Advanced hunting
- B. Threat analytics **Most Voted**
- C. Incidents & alerts
- D. Learning hub

Correct Answer: B

Community vote distribution

B (100%)

Question #42

Topic 1

Case study -

This is a case study. Case studies are not timed separately. You can use as much exam time as you would like to complete each case. However, there may be additional case studies and sections on this exam. You must manage your time to ensure that you are able to complete all questions included on this exam in the time provided.

To answer the questions included in a case study, you will need to reference information that is provided in the case study. Case studies might contain exhibits and other resources that provide more information about the scenario that is described in the case study. Each question is independent of the other questions in this case study.

At the end of this case study, a review screen will appear. This screen allows you to review your answers and to make changes before you move to the next section of the exam. After you begin a new section, you cannot return to this section.

To start the case study -

To display the first question in this case study, click the Next button. Use the buttons in the left pane to explore the content of the case study before you answer the questions. Clicking these buttons displays information such as business requirements, existing environment, and problem statements. If the case study has an All Information tab, note that the information displayed is identical to the information displayed on the subsequent tabs. When you are ready to answer a question, click the Question button to return to the question.

Overview -

Fabrikam, Inc. is a financial services company.

The company has branch offices in New York, London, and Singapore. Fabrikam has remote users located across the globe. The remote users access company resources, including cloud resources, by using a VPN connection to a branch office.

Existing Environment -

Identity Environment -

The network contains an Active Directory Domain Services (AD DS) forest named fabrikam.com that syncs with an Azure AD tenant named fabrikam.com. To sync the forest, Fabrikam uses Azure AD Connect with pass-through authentication enabled and password hash synchronization disabled.

The fabrikam.com forest contains two global groups named Group1 and Group2.

Microsoft 365 Environment -

All the users at Fabrikam are assigned a Microsoft 365 E5 license and an Azure Active Directory Premium Plan 2 license.

Fabrikam implements Microsoft Defender for Identity and Microsoft Defender for Cloud Apps and enables log collectors.

Azure Environment -

Fabrikam has an Azure subscription that contains the resources shown in the following table.

Name	Type	Description
App1	Azure logic app	To automate incident generation in an internal ticketing system, the security operations (SecOps) team invokes App1 by using an HTTP endpoint.
SAWkspc1	Azure Synapse Analytics workspace	SAWkspc1 hosts an Apache Spark pool named Pool1.
LAWkspc1	Log Analytics workspace	LAWkspc1 will be used in a planned Microsoft Sentinel implementation.

Amazon Web Services (AWS) Environment

Fabrikam has an Amazon Web Services (AWS) account named Account1. Account1 contains 100 Amazon Elastic Compute Cloud (EC2) instances that run a custom Windows Server 2022. The image includes Microsoft SQL Server 2019 and does NOT have any agents installed.

Current Issues -

When the users use the VPN connections, Microsoft 365 Defender raises a high volume of impossible travel alerts that are false positives.

Defender for Identity raises a high volume of Suspected DCSync attack alerts that are false positives.

Requirements -

Planned changes -

Fabrikam plans to implement the following services:

- Microsoft Defender for Cloud
- Microsoft Sentinel

Business Requirements -

Fabrikam identifies the following business requirements:

- Use the principle of least privilege, whenever possible.
- Minimize administrative effort.

Microsoft Defender for Cloud Apps Requirements

Fabrikam identifies the following Microsoft Defender for Cloud Apps requirements:

- Ensure that impossible travel alert policies are based on the previous activities of each user.
- Reduce the amount of impossible travel alerts that are false positives.

Microsoft Defender for Identity Requirements

Minimize the administrative effort required to investigate the false positive alerts.

Microsoft Defender for Cloud Requirements

Fabrikam identifies the following Microsoft Defender for Cloud requirements:

- Ensure that the members of Group2 can modify security policies.
- Ensure that the members of Group1 can assign regulatory compliance policy initiatives at the Azure subscription level.
- Automate the deployment of the Azure Connected Machine agent for Azure Arc-enabled servers to the existing and future resources of Account1.
- Minimize the administrative effort required to investigate the false positive alerts.

Microsoft Sentinel Requirements -

Fabrikam identifies the following Microsoft Sentinel requirements:

- Query for NXDOMAIN DNS requests from the last seven days by using built-in Advanced Security Information Model (ASIM) unifying parsers.
- From AWS EC2 instances, collect Windows Security event log entries that include local group membership changes.
- Identify anomalous activities of Azure AD users by using User and Entity Behavior Analytics (UEBA).
- Evaluate the potential impact of compromised Azure AD user credentials by using UEBA.
- Ensure that App1 is available for use in Microsoft Sentinel automation rules.
- Identify the mean time to triage for incidents generated during the last 30 days.
- Identify the mean time to close incidents generated during the last 30 days.
- Ensure that the members of Group1 can create and run playbooks.
- Ensure that the members of Group1 can manage analytics rules.
- Run hunting queries on Pool1 by using Jupyter notebooks.
- Ensure that the members of Group2 can manage incidents.
- Maximize the performance of data queries.
- Minimize the amount of collected data.

You need to minimize the effort required to investigate the Microsoft Defender for Identity false positive alerts.

What should you review?

- A. the status update time
- B. the resolution method of the source computer
- C. the alert status

D. the certainty of the source computer **Most Voted**

Correct Answer: D

Question #43

Topic 1

HOTSPOT

-

You have a Microsoft 365 E5 subscription that uses Microsoft Defender 365.

Your network contains an on-premises Active Directory Domain Services (AD DS) domain that syncs with Azure AD.

You need to identify the 100 most recent sign-in attempts recorded on devices and AD DS domain controllers.

How should you complete the KQL query? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer Area

```
DeviceLogonEvents
| extend Table = 'table1'
| take 100
| 

IdentityInfo  
IdentityLogonEvents  
IdentityQueryEvents

 (  

join kind = full outer  
join kind = inner  
union

  
  | extend Table = 'table2'  
  | take 100  
)  
| project-reorder Timestamp, Table, AccountDomain, AccountName, AccountUpn, AccountSid  
| order by Timestamp asc
```

Correct Answer:

Answer Area

```
DeviceLogonEvents
| extend Table = 'table1'

Question #45

Topic 1

You have a Microsoft 365 E5 subscription that uses Microsoft Defender 365.

You need to ensure that you can investigate threats by using data in the unified audit log of Microsoft Defender for Cloud Apps.

What should you configure first?

- A. the User enrichment settings
- B. the Azure connector
- C. the Office 365 connector

Most Voted
- D. the Automatic log upload settings

Correct Answer: C

Community vote distribution

C (100%)

Question #46

Topic 1

51 HOTSPOT

You have a custom detection rule that includes the following KQL query.

```
AlertInfo
| where Severity == "High"
| distinct AlertId
| join AlertEvidence on AlertId
| where EntityType in ("User", "Mailbox")
| where EvidenceRole == "Impacted"
| summarize by Timestamp, AlertId, AccountName, AccountObjectId,
EntityType, DeviceId, SHA256
| join EmailEvents on $left.AccountObjectId == $right.RecipientObjectId
| where DeliveryAction == "Delivered"
| summarize by Timestamp, AlertId, ReportId, RecipientObjectId,
RecipientEmailAddtess, EntityType, DeviceId, SHA256
```

For each of the following statements, select Yes if True. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Answer Area

Statements	Yes	No
The custom detection rule can be used to automate the deletion of email messages from a user's mailbox based on the RecipientEmailAddress column.	☐	☐
The custom detection rule can be used to restrict app execution automatically based on the DeviceId column.	☐	☐
The custom detection rule can be used to automate the deletion of a file based on the SHA256 column.	☐	☐

Answer Area

Statements

Yes

No

Correct Answer:

The custom detection rule can be used to automate the deletion of email messages from a user's mailbox based on the RecipientEmailAddress column.

☒

☐

The custom detection rule can be used to restrict app execution automatically based on the DeviceId column.

☐

☒

The custom detection rule can be used to automate the deletion of a file based on the SHA256 column.

☐

☒

Question #47

Topic 1

You have an Azure subscription that uses Microsoft Defender for Servers Plan 1 and contains a server named Server1.

You enable agentless scanning.

You need to prevent Server1 from being scanned. The solution must minimize administrative effort.

What should you do?

A. Create an exclusion tag. **Most Voted**

B. Upgrade the subscription to Defender for Servers Plan 2.

C. Create a governance rule.

D. Create an exclusion group.

Correct Answer: A

Community vote distribution

A (62%)

B (38%)

Question #48

Topic 1

You need to configure Microsoft Defender for Cloud Apps to generate alerts and trigger remediation actions in response to external sharing of confidential files.

Which two actions should you perform in the Microsoft 365 Defender portal? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

A. From Settings, select Information Protection, select Azure Information Protection, and then select Only scan files for Azure Information Protection classification labels and content inspection warnings from this tenant.

B. From Cloud apps, select Files, and then filter File Type to Document.

B. From Settings, select Information Protection, select Files, and then enable file monitoring. **Most Voted**

D. From Cloud apps, select Files, and then filter App to Office 365.

E. From Cloud apps, select Files, and then select New policy from search.

F. From Settings, select Information Protection, select Azure Information Protection, and then select Automatically scan new files for Azure Information Protection classification labels and content inspection warnings. **Most Voted**

Correct Answer: BF

Question #49

Topic 1

HOTSPOT

-

Your network contains an on-premises Active Directory Domain Services (AD DS) domain that syncs with Azure AD.

You have a Microsoft 365 E5 subscription that uses Microsoft Defender 365.

You need to identify all the interactive authentication attempts by the users in the finance department of your company.

How should you complete the KQL query? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer Area

▼

BehaviorAnalytics
IdentityInfo
IdentityQueryEvents

```
| where Department == 'Finance'  
| project-rename objid = AccountObjectId  
| join
```

▼

```
on $left.objid == $right.AccountObjectId
```

AuditLogs
IdentityLogonEvents
SigninLogs

Correct Answer:

Answer Area

▼

BehaviorAnalytics
IdentityInfo
IdentityQueryEvents

| project-rename objid = AccountObjectId  
| join
```

▼

AuditLogs
IdentityLogonEvents
SigninLogs

```
on $left.objid == $right.AccountObjectId
```

Question #50

Topic 1

You have a Microsoft 365 E5 subscription that uses Microsoft Defender for Endpoint.

You need to identify any devices that triggered a malware alert and collect evidence related to the alert. The solution must ensure that you can use the results to initiate device isolation for the affected devices.

What should you use in the Microsoft 365 Defender portal?

A. incidents

B. Remediation

C. Investigations

D. Advanced hunting

Most Voted

Correct Answer: D
